OSTRICH MEAT INTRODUCTION

Ostrich meat is red, like beef and mutton, unlike other birds, but it has a major difference from beef and mutton, and this is a big difference in fat and cholesterol.

Ostrich meat contains more protein, minerals and a variety of vitamins and has the least amount of fat. There is only one gram of saturated fat in every 100 grams of ostrich meat, which means that ostrich meat is a miracle in treating all kinds of cardiovascular diseases and preventing obesity.

More importantly, ostrich meat, unlike beef and mutton, is free of any parasites, and this is a very strong reason to eat ostrich meat instead of beef and mutton.

INGREDIENTS OF OSTRICH MEAT

This table is based on 100 grams of ostrich meat

Ingredient	Amount of material
calories	145 kilocalories
blood cholesterol	85 mg
